

Session 7: Integrating React with APIs

```
frontend > src > pages > customer > Products.jsx > CATEGORY_SLUG_MAP > 'Handheld, Console'
150 export default function Products() {
171   useEffect(() => {
172     fetch(`http://localhost:8000/api/products?${params.toString()}`)
173       .then(res => res.json())
174       .then(data => {
175         if (!Array.isArray(data)) {
176           console.error('API did not return an array:', data);
177           setProductsList([]);
178           return;
179         }
180         const mapped = data.map(item => ({
181           id: item.id,
182           slug: item.slug,
183           name: item.name,
184           brand: item.brand?.name || 'Unknown',
185           category: item.category?.name || 'Unknown',
186           categorySlug: item.category?.slug || '',
187           price: item.skus?.[0]?.promotional_price || item.skus?.[0]?.price || 0,
188           originalPrice: item.skus?.[0]?.promotional_price ? item.skus?.[0]?.price : null,
189           image: item.images?.[0]?.url || '',
190           rating: item.rating || 5,
191           reviewCount: item.review_count || 0,
192           badge: item.skus?.[0]?.promotional_price ? 'HOT' : null,
193           specs: Object.values(item.specifications || {}).slice(0, 4),
194           fullSpecs: item.specifications || {},
195           stock: item.skus?.[0]?.stock_quantity || 0,
196           skus: item.skus || []
197         }));
198         setProductsList(mapped);
199       })
200       .catch(err => {
201         console.error('Failed to fetch products', err);
202       });
203   });
204 }
```
